Conclusions: Multi-PCR-SSCP is a sensitive and specific method for rapid detection of *aphC* promoter, *inhA*, and *katG* gene mutations in isoniazid-resistant *Mycobacterium tuberculosis* isolates. Objective: To develop a new multiple-polymerase chain reaction-single strand conformation polymorphism multi-PCR-SSCP system for detecting the *aphC* promoter, *inhA*, and *katG* gene mutations in isoniazid-resistant *Mycobacterium tuberculosis* isolates in the single reaction, and for the quick diagnosis of isoniazid-resistant *Mycobacterium tuberculosis* isolates. Reissner C, Runkel F, Missler M. The text of the Cangjiepian is compiled in a very interesting manner: The characters are not forming sentences, but are grouped according to meaning, forming a semantic coherence.
