## The Importance of School Facilities in Improving Student Outcomes

Under the duress of existing financial constraints, efforts to control the consequences of urbanization are often mismanaged, and rarely incorporate urban planning expertise.

### Urban mobility

These efforts have resulted in the rapid growth of what has been termed the 'informal sector', which provides much of the cheap goods and services essential to city economies, business, and consumers.

### Urbanization: An Environmental Force to be Reckoned With

Yet, of the global working-age population is underutilized inactive or underemployed and approximately 75 million youth are unemployed. In parts of many cities, poor people can expect to see one in four of their children die of serious malnutrition before the age of five, or one adult in two suffering intestinal worms or serious respiratory infections. Indeed, many have succeeded in reversing these trends through enlightened policies, cooperation between the public and private sectors, and significant investments in personnel, institutions, and technological innovation.

### NATIONAL POPULATION POLICY OF ETHIOPIA

To restore these fly ash-ravaged sites and to prevent harmful effects on the environment, biological reclamation has been carried out. Only if centres are firmly connected to this network can they hope to attract investment in technologies and manufacturing goods for world markets. The focus of this paper is on the middle two layers.

## The Importance of School Facilities in Improving Student Outcomes

They have a responsibility to ensure that development occurs in the right place, at the right time; that buildings are structurally sound and will not endanger the safety or lives of those who live in or use them; that they are provided with the basic services and facilities necessary to support the purpose for which they are erected; and to ensure that the environment and natural resources of Antigua and Barbuda are managed carefully and prudently for the enjoyment of present and future generations. *Journal of Environmental Planning and Management*, 49 5 , 631—651. Precipitation is 5 percent to 10 percent higher in cities; thunderstorms and hailstorms are much more frequent, but snow days in cities are less common.
