## Mineralienatlas Lexikon

At a higher level, the equitability of species richness among families significantly decreased.

## Erycinidae through Carditidae

The shell margin, or generating curve, where growth in the spiral direction takes place, may lie in a plane or a more complex three-dimensional configuration. For example, smooth valve edges occur in members of the *Arca imbricata* Bruguière, 1789 complex including A.

## Mineralienatlas Lexikon

PDF documents opened from your browser may not display or print as intended. A crenulated or plicated margin without radial projections is very common among species attached to hard substrata mytilids, arcids, pectinoideans, ostreoides and chamids and slow to moderate burrowers nuculids, arcids, lucinids, kelliellids, astartids, crassatellids, venerids and some corbulids.

## Description: Tertiary marine pelecypods of California and Baja California

The asymmetry is generally concentrated on the posterior and posterodorsal sectors of the valve margin, but in limids of the genus *Ctenoides* it also affects the anterior edge.

## Tertiary marine pelecypods of California and Baja California : Erycinidae through Carditidae / by Ellen James Moore

Classifying marginalia In order to facilitate description, I use the following definitions and conventions: These definitions are descriptive statements of the geometry of the valve margin, and thus imply nothing about the mechanism of formation or growth of the valve edge.

## Mineralienatlas Lexikon

The present paper offers a descriptive survey of marginal modifications in the shells of selected bivalves. The high-amplitude equivalent is a lobe.

**Bivalve fauna succession in the north Pacific during the Paleogene**

Bivalves from Suspect Cold Seeps, Wagonwheel Mountain, Central California, J.
