## Energy

A tensioned device such as a or , though at rest, has the potential for creating motion; it contains because of its configuration.

## What is energy? explained

For the development of the concept of energy and the principle of energy conservation, see ; ; ; and . For example, when a box slides down a hill, the potential energy that the box has from being located high up on the slope is converted to kinetic energy, energy of motion. This article was most recently revised and updated by , Senior Editor.

## Energy

People use energy to walk and bicycle, to move cars along roads and boats through water, to cook food on stoves, to make ice in freezers, to light our homes and offices, to manufacture products, and to send astronauts into space.

## Energy

Energy is the ability to do work. Scientists define energy as the ability to do work. Hence, heat transferred may become , while work done may itself in the form of .
