**American alligator (*Alligator mississippiensis*)**

Alligators are easily spotted at night by the shine of their eyes in the beam of a headlamp. Alligators live in swampy areas, rivers, streams, lakes and ponds.

## How Dangerous are American Alligators? And Other Alligator Facts

Intermediate temperature ranges yield a mix of both male and female hatchlings. Elliott 1994 has made a recording of this penetrating roar available on a CD. Scientific and common names for the amphibians and reptiles of Mexico in English and Spanish.

## American alligator

Since alligators were reported from the Brownsville region before the presumptive introductions took place Baird, 1859 , they are probably indigenous Ross and Ernst, 1994. A long, powerful tail helps propel the animal through water, as do webbed feet. In 1993, he began observing that some of the animals reached a point where they stopped growing.

## American alligator

We highly recommend reviewing files prior to interpreting these data. They are cold-blooded and depend on the natural world around them to provide warmth. Eggs that incubate at temperatures ranging from 90 to 93 degrees Fahrenheit hatch as males, while those that incubate from 82 to 86 degrees hatch as females.

**American alligator (*Alligator mississippiensis*)**

If in the unlikely event you do get attacked you need to make life as difficult as possible for the gator. Time of day is also a factor in alligator attacks with dawn and dusk being prime times to avoid.

**American alligator (*Alligator mississippiensis*)**

In 2008, SC DNR established the alligator as a game animal and designated a hunting season.

### **American Alligator: Species Profile**

If the prey is large, they shake it apart into smaller, manageable pieces. Bad joke out of the way, there are a few ways to tell these reptiles apart. Many young alligators are eaten by predators such as birds, snakes, fish, and mammals, but are usually safe after they reach four feet 1.

### **How Dangerous are American Alligators? And Other Alligator Facts**

When the alligator is in the water, it can swim with just the top of its head above the water. Alligators have a wide, round snout, while crocodiles have a long, thin snout. However, alligators have rounded snouts, while most crocodile species have longer, pointed snouts.
