**Scientific Hypothesis, Theory, Law Definitions**

In the course of the last few centuries, two main rival philosophical traditions have emerged about the nature of legality. Thus, MacCormick seems to be offering a normative argument for a claim that has often been associated with positivism, namely a version of the Separation Thesis. This hypothesis can be disproven if you observe a stain is removed by one detergent and not another.

**Toward a More General Theory of Regulation**

By contrast, if no non-question begging argument can be given for thinking that understanding law requires a constructive interpretation, then one would be free to maintain that there can be purely descriptive first-order legal theories. Many non-mathematical interpretations of mathematical or other results obtained from scientific experiments infringe upon the Law and should be eliminated from science as erroneous concepts.
