The 2 types of non-diabetic hypoglycemia are fasting hypoglycemia and reactive hypoglycemia. You may also receive a hormone called glucagon that helps raise your blood sugar level.

Non

Follow the meal plan that you and the dietitian have planned. How can I prevent hypoglycemia? Reactive hypoglycemia usually happens about 2 to 4 hours after a meal.

Non

Eat a variety of vegetables with your meals. Learn about your health condition and how it may be treated.

Non

You may need to change what and when you eat to prevent low blood sugar levels.

Non

Carbohydrates are found in bread, rice, cereal, fruits, juice, and milk. After you have fasted for 8 hours, your blood sugar level is tested. © Copyright IBM Corporation 2020 Information is for End User's use only and may not be sold, redistributed or otherwise used for commercial purposes.
