I have discussed the site and its many allusions to antiquity in previous blog posts and , relating to a publication in the , published online in Jan 2013 and in print form this month. A widely held theory amongst archaeologists is that these megalithic tombs were intentionally made to resemble the long timber houses which had been constructed by Neolithic farming peoples in the basin from circa 4800 BCE. A deposit of small, spherical black seeds was found nearby and may have been associated with the box; although a sample was collected during the excavation, this could not be located at the time of writing A.

I was able to take in more of the island on the slowish drive back. The brilliant white bellowing spring clouds were separated by heavy, deep and very dark storms that could be seen to drench what ever lay beneath.

Rollright Stones, Chipping Norton, Oxfordshire

Dieter Aschoff, proved the effect of geo-physical anomalies on people, through the use of an electromagnetic blood test. The carvings have not been carbon dated or tested to see the time period they come from and little is known about the structure itself. Archaeologists have long slammed such initiatives as sacrilege and the Central Council of Archaeology has always been very choosy about who gains access for commercial purposes.

They're Alive! Megalithic Sites Are More than Just Stone

Modern Engagement Of course the Rollright Stones are a focus of heritage conservation, modern religious practices as well as those interested in prehistory and history. He then followed this up with an outline of the management history of the Stones, published in 1986. Dames reckons this shape mimics that of the vulva.

The monuments of prehistoric times (Stonehenge, Castlerigg, Avebury, Rollright Stones)

The largest stone in the King's Men. I decided to read more about these findings.

Stone circles in the landscape and mindscape

The boundary is marked by a fert, a grave-mound, or a ... collection of grave-mounds During the crossing you get a chance to see many sea birds and the other islands. A magnetometer survey of the site revealed how a band of magnetic force is attracted into the stone circle through a narrow gap of stones that act as the entrance.

Stone circles in the landscape and mindscape

Their precise locations are unknown, but they were found during quarrying in fields to the east of the King Stone, on both sides of the Ridgeway and on all sides of what became the three-way junction of the Little Rollright, Great Rollright and Long Compton parish boundaries. The grave assemblage from Rollright thus reflects wider trends in mortuary practice across 7th-century England. These monuments attracted several burial mounds in the Bronze Age, including a chambered round cairn occupying the apex of a natural hillock resembling—and for some years believed to be—a Neolithic long barrow.

They're Alive! Megalithic Sites Are More than Just Stone

For me, this worked well and created memorable images and information.
