Coronavirus

If the hazard analysis reveals one or more hazards that require a preventive control, the facility must have and implement written preventive controls for the identified hazards. When multiple investigations end in no corrective action, a new problem statement with expanded scope may be generated, and a more thorough investigation to root cause performed.

Perspective vs Point of View Examples

This maintains that, of the two available interpretations of the principle, neither are plausible: weak formulations which hold that precaution in the face of uncertain harms is permissible are trivial, while strong formulations which hold that precaution in the face of uncertain harms is required are
