For example, children understand that a visit to the grocery store involves a specific sequences of steps: Dad walks into the store, gets a grocery cart, selects items from the shelves, waits in the check-out line, pays for the groceries, and then loads them into the car. Goswami 1996 argues against the relational shift hypothesis, citing as evidence a study performed by Goswami and Brown 198.

Early Childhood Cognitive Development: Information Processing

For example, children can learn to pay attention to and memorize lists of words or facts.
