Air Pollution Monitoring

The gives you access to air pollution data annual summary data for the entire United States by allowing you to produce reports and maps of air pollution data based on criteria that you specify.

Air Pollution Monitoring

NAMS monitors also must submit detailed quarterly and annual monitoring results to OAQPS.

Air Pollution Monitoring

The contains compliance and permit data for stationary sources regulated by EPA, state and local air pollution agencies. Ozone is also a greenhouse gas that can be both good and bad for our environment. These pollutants can injure health, harm the environment and cause property damage.

What Causes Air Pollution?

Primary standards protect against adverse health effects; secondary standards protect against welfare effects, such as damage to farm crops and vegetation and damage to buildings. The 1990 Amendments to the Clean Air Act also requires a fourth category of a monitoring station, the Photochemical Assessment Monitoring Station PAMS , which measures ozone precursors approximately 60 volatile hydrocarbons and carbonyl.

Air Pollution Monitoring

There are two types of standards -- primary and secondary.

Air Pollution Monitoring

Some of the particles and gases come directly from these sources, but others form through chemical reactions in the air. Air pollution and COVID-19 mortality in the United States: Strengths and limitations of an ecological regression analysis By using the contents on this website and the Github repo, you agree to cite: Wu, X. Where do aerosols come from? This animation uses NASA data to show how ash from a volcano in Chile travels around the world in our atmosphere.

What Causes Air Pollution?

The results were statistically significant and robust to secondary and sensitivity analyses.

Fine particulate matter and COVID

These particles and gases can be bad for the planet and for our health, so keeping track of them is important.
