Glassless negative carriers are popular because they're less expensive, they don't have a surface to break or keep clean, and they don't cause Newton's Rings. Wash hands after working with chemicals in both the film processing rooms and darkrooms, especially before eating. Enter your darkroom and turn on safelight and let it warm up for a few minutes.

## Print: Contact Printing and Enlarging

You want to turn it into large prints, so we have to enlarge it. A darkroom is typically divided into two separate sections — a dry side where the enlarger is located and a wet side with the paper processing chemistry located in a sink. Condensers collimate the light—they bend the light rays parallel to each other, which has two effects on the image.
