BEA Advisory Committee

To be considered for presentation, papers must be submitted by Monday, April 5.

The Determinants of Export Diversification at All Margins Case Study: South Korea

Structural recombination and innovation: Unlocking intraorganizational knowledge synergy through structural change. Male refugees of working age had a 67 percent employment rate from 2009 to 2011, while native-born males had only a 60 percent employment rate during the same time period. Inertia and incentives: Bridging organizational economics and organizational theory.

Michael Gort (born September 30, 1923), American economics professor

First, developing a modern service sector could require comparatively higher levels of human capital, innovation, and private sector credit, which are likely to be missing in resource-rich countries. Legacy divestitures: motives and implications. Is group affiliation profitable in emerging markets? In Georgia, 91 percent of refugee households were entirely self-sufficient and working within six months of arrival.

The Diversification of Production

One of the most intriguing and debated issues in portfolio theory are the interrelationships between stock markets and the real effects of these to international portfolio diversification. Moreover, the study recommends the future research which will specialize in exploring the factors affecting export diversification process in Korea to measure the impact of other important factors such as human capital accumulation, and macroeconomic stability with consideration of the international competitiveness, as well as tariff rates, institutional development, and trade facilitations.

BEA Advisory Committee

The combined diversification breadth and mode dimensions and the performance of large diversified firms. Greater resource exports appear to be associated with lower private sector credit access, confirming the findings of.

Product export diversification and sustainable economic growth in developing countries

As shown in figure S6 in the supplementary online material, natural resources had a greater contribution to exports in the 1970s, which fell significantly in the 1980s before rising again after the 1990s. No Contagion, Only Interdependence: Measuring Stock Market Co-Movements, Massachusetts: National Bureau of Economic Research, 1999. A resource-based approach to the multibusiness firm: Empirical analysis of portfolio interrelationships and corporate financial performance.

135446122

Our analysis reveals how the research on corporate diversification has extended the range of topics addressed and added new theoretical approaches and methodological tools, thereby ensuring greater maturity in its development.
