Level and Determinants of Food Security in North Wollo Zone (Amhara Region)

Thus, it is hypothesized that age of the household heads and food security are positively correlated.

Roles of Rural Women in Livelihood and Sustainable Food Security in Ethiopia: A Case Study from Delanta Dawunt District, North Wollo Zone :: Science Publishing Group

Food insecurity, hunger, and famine had occurred as far back as the beginning of human settlement on the planet earth. Thus, distance from input market and food security will have a negative relationship.

Sustainable agriculture and food security in Africa: The role of innovative technologies and international organizations

In instances where the independent variables are a categorical or a mix of continuous and categorical, logistic regression is preferred to discriminant analysis. In general, women have limited access of dietary composition of nutritional meals in the study area.

Ethiopia Bibliography 2001 on JSTOR

The program has four components: i the Productive Safety Net Program PSNP ii the Household Asset Building Program HABP iii the Complementary Community-based Infrastructure Program CCI and iv the Voluntary Resettlement Program VRP. The rural population of the district accounts for 88.

Level and Determinants of Food Security in North Wollo Zone (Amhara Region â€“ Ethiopia)

The average monthly expenditure of the sample household was 1483 birr which is greater than 559 birr as compared to food insecure households, and lower than by 273 birrs as compared to food secured households. Free relief food and safety net program played great role to fill good gap in the study area. Donor financing is allocated to PSNP and HABP capacity building activities, while Government funding to the FSP is assigned to HABP, CCI and VRP ,.

Roles of Rural Women in Livelihood and Sustainable Food Security in Ethiopia: A Case Study from Delanta Dawunt District, North Wollo Zone :: Science Publishing Group

About 42 percent of the sample households were measured to be food insecure. The livelihood of much of the population depends on rain-fed agricultural practices, including both crop production and livestock rearing.
