## AQA

The conditions for this process. Required practical 12 Separation of species by thin-layer chromatography. Primary alcohols can be oxidised to aldehydes which can be further oxidised to carboxylic acids.

## Organic Chemistry at CU Boulder

Many of these compounds are used as drugs, medicines and plastics.

## Books: Chemistry

Ethanol is one such alcohol and it is produced using different methods, which are considered in this section. Carboxylic acids are weak acids but will liberate CO<sub>2</sub> from carbonates. Vegetable oils and animal fats can be hydrolysed in alkaline conditions to give soap salts of long-chain carboxylic acids and glycerol.

## Homepage

The importance of hydrogen bonding and sulfur—sulfur bonds in proteins.
