Thanks also to Jennie Strickland, for statement drafting, and to Jessie McGowan, for reviewing the literature.

Educational TV May Boost Intellectual Development

Further, TV viewing has been found to be negatively associated with school readiness skills, especially as family income decreases. Lower-income families reported that their children spent more time engaging with educational screen activities than higher-income families did. Moreover, viewers are intimately familiar with the content of television and tend to associate it with pleasurable experience because of its power to entertain Bates, 1983.

Television Can Enhance Children's Intellectual Development, Study Finds

Some have argued that television clearly has negative effects on youths—such as violent programming resulting in children who are more fearful, more aggressive, or more insensitive to the suffering of others—whereas others believe that such effects are, at best,. So how can teachers better motivate girls to take part? Am Behav Sci 2005;48 5 :624—45. J Child Psychol Psychiatry 2014;55 6 :635—54.

They can interact, but can they learn? Toddlers' transfer learning from touchscreens and television

High exposure to background TV has been found to negatively affect language use and acquisition, attention, cognitive development and executive function in children younger than 5 years. The report found that only 12% of 14-year-old girls get enough physical activity each week — whereas twice as many boys do. Potential benefits and risks were categorized into developmental, psychosocial and physical domains.

[PDF] RESEARCH ON LEARNING FROM TELEVISION

This was essential because the international body of literature was gargantuan. The first year of Peace Corps educational television in Colombia: A research project report. Many preschoolers accumulate screen time at home and in child care , from a variety of screens that are easily

transportable.

11. Research on Learning from Television
