

# MCTS self -paced training kit (Exam 70-643) - configuring Windows server 2008 applications infrastructure

## Microsoft Press - Mat Power Practice PDF Book

**STK Terrain Server Installation Guide**

This guide walks you through the process of installing and configuring STK Terrain Server on your system.

**System Requirements**

- 64-bit Windows, including Windows Server 2008 or later, and Windows Vista or later.
- Microsoft .NET Framework v3.5 or later.
- Microsoft Internet Information Services (IIS) v7.0 or later.
- 4 GB RAM or more.
- Faster CPUs, Solid State Drive, and more RAM will significantly improve terrain processing time.
- Plenty of disk space for storing raw and processed terrain data. At a minimum, 500 GB of disk space is required for hosting the processed STK World Terrain Dataset (WorldTerrain.zip).

**Installation**

1. Install Microsoft Internet Information Services (IIS) v7.0+ and Microsoft .NET Framework v4.5+ if they're not already installed.
2. Open "C:\Windows\Microsoft.NET\Framework\v4.0.30319\aspnet\_regiis.exe" without the quotes from a command prompt with administrator rights to ensure ASP .NET is registered in IIS. If you get a message saying "This action is not supported on this version of the operating system", right-click the file and select "Run as administrator". You must install ASP .NET 4.5. The message from aspnet\_regiis has more information on how to do this.
3. Double-click install.exe to run the STK Terrain Server installer and follow the on-screen instructions.
4. Launch License Manager and use it to install your STK Terrain Server license.
5. Launch STK Terrain Server by selecting it from the Start menu/screen, or by visiting <http://stkterrainserver/stkserver>.

**Default Authentication**

The STK Terrain Server installer provides a means for easy configuration of Windows Authentication. By default, Windows Authentication will be enabled, and all users will have Read access to the STK Terrain Server. If you want to change the authentication method, or if you want to change the groups that can modify the STK Terrain Server contents, if there is no possibility of accidental or intentional misuse in your environment, you may disable Windows Authentication in the Setup dialog.

The Windows Group may be set to a different Windows Group if preferred by specifying a new group name in the Setup Dialog. Windows groups can be added and managed from the Computer Management Windows application, via the Groups folder under "Local Users and Groups".

Once you pass the seven MCITP exams, you have the MITP certification for life, and may even apply it towards future certifications from Microsoft that are eligible. The test is appropriate for you if you are working or want to work in a typically complex computing environment of medium-to-large organizations that use Microsoft Visual Studio.
