Theoretical Perspectives « Jolle@UGA

To provide students with the foundational knowledge and intellectual tools that enhance and transcend their academic program of study. Language and Literacy The immersion approach first gained traction in North America because educators believed in its potential to move students further towards bilingualism and biliteracy.

Researchers posit that metalinguistic skills positively impact learning to read in alphabetic languages, because it facilitates the development of critical literacy sub-skills such as phonological awareness and knowledge of letter-sound correspondences for word decoding. Studies consistently find that English-speaking immersion students' oral language lacks grammatical accuracy, lexical specificity, native pronunciation, and is less complex and sociolinguistically appropriate when compared with the language native speakers of the second language produce. Introduction: The Contested Subject -the materiality of language is a ground for desacrilizing texts, no reason to automatically consider written texts more permanent.

What the Research Says About Immersion

Criticisms and Questions -The materiality of language is an axiom, a postulate, a fundamental assumption, a Kuhnian paradigm that leads to new approaches to the study and teaching of language, but is still not a part of our ordinary sense of what language is and does.

The double perspective (1988 edition)

This research also exposes some of the challenges that accompany the immersion model, with its multilayered agenda of language, literacy and intercultural skills development during subject matter learning. Note: This chapter was originally published by the Asia Society as a chapter in the handbook entitled Chinese Language Learning in the Early Grades. This challenge is particularly pronounced once the children have moved beyond the primary grades.
