UPS: Uninterruptible Power Supply is a system used to condition utility power before it is fed to computer systems and provides power failure ride-thru when the main utility fails.

IGCSE ICT

Ensures that the last print copy of a Cambridge University Library holding is retained as a University asset for future research as part of our responsibility to preserve the scholarly record.

Computer

To help make these judgements Cambridge University Library works within a national framework alongside the British Library and other members of the UK Research Reserve UKRR consortium.

Library Storage Facility

Before computers, libraries had to use manual paper-based systems.

Computer

Details of turnaround times can be found in the. For this reason, libraries use computer-based systems to keep a record of their books, and of the people who borrow the books.

ACCESS Tests

Libraries often contain many thousands of books, magazines, CD-ROMs, etc. . We are also exploring other ways to make the content available, for instance through a scanning service.

IGCSE ICT

The fronts of the racks face each other in a row that has vented tiles in the raised floor to deliver cold air to the rack fronts from the CRAC units. A: Although there is no standard measure of low use, libraries will use borrowing data, professional expertise and evidence from in-house consultation with readers to identify items which are considered to be low use. States have a chance to review their data before scores are printed, allowing them to identify errors and make corrections.
