Neuerscheinungen, Zeitschrift für Tourismuswissenschaft

Because such platforms may add ubiquity providing services to costumers at anytime and anywhere; connectivity with wireless networks e. Finally, we present results of a first user study supporting our approach. In this demonstration, we present the architecture of the federated recommender system and give an online demo to show its detailed working procedures and results in content recommendations.

Introduction to Recommender Systems Handbook

In my work, I study the impact of data imbalances for the stakeholders, according to how recommendations are generated. The papers cover a wide range of topics, ranging from knowledge discovery through conceptual and linguistic modeling, knowledge and information modeling and discovery, cross-cultural communication and social computing, environmental modeling and engineering, and multimedia data modeling and systems to complex scientific problem-solving.

The use of photographs on consumer generated content websites: practical implications for destination image analysis

For example, community-based approaches require a minimal size of the user community, which is hard for small- and medium sized e-tourism platforms to achieve. Netnography is among the online qualitative methods to have received the least attention from tourism scholars.

Rich user profiles are elicited using natural language dialogue. The book encompasses the field of biomedical and health informatics in a very broad framework, and the timely inclusion of papers on the current pandemic will make it of particular interest to all those involved in the provision of healthcare everywhere. Such systems have already been successfully deployed in various domains and have proven to be valuable tools for coping with information overload and for guiding online customers through the decision-making and purchase process.

Mobile recommender systems in tourism

Therefore, the proposed algorithms and strategies have been designed aiming at efficiency, simplicity and usability on small display sizes. ISBN 978-3835007062 EUR 49,90 Dirk Hoppe Tourismus im Internet: Was erwarten Nutzer von Reiseportalen. The evaluation indexes prove that our proposed recommender system outperforms its counterparts by providing more accurate and personalized recommendations.
