Not lost forever? How AI is restoring famous paintings.

My work in Kenya, for example, was heavily influenced by a Christian Science Monitor article I had forced myself to read 10 years earlier. During the restoration project, the painting was encased in a specially designed glass room and studied in unprecedented detail from canvas to the final layer of varnish. Researchers used advanced technology like high tech scanners, x-rays and digital photography to get down to the most precise details of the Lundens copy.

The 1642 painting last underwent significant restoration more than 40 years ago after it was slashed by a knife-wielding man and is starting to show blanching in parts of the canvas. We have a mission beyond circulation, we want to bridge divides. Where does this estimate come from? Then, an AI program learned the mechanics of Rembrandt's technique, from the colors he preferred to his style of brushstroke.
