Home

Unless it was a HEAD request, the response SHOULD include an entity containing a list of resource characteristics and location s from which the user or user agent can choose the one most appropriate. Ideally, the response entity would include enough information for the user or user agent to fix the problem; however, that might not be possible and is not required.

Home

The entity format is specified by the media type given in the Content-Type header field.

On 'Conflict', 'Peace' and 'Genocide': Time for New Language on Palestine and Israel

Unless the request method was HEAD, the entity of the response SHOULD contain a short hypertext note with a hyperlink to the new URI s. Conflicts are most likely to occur in response to a PUT request. Yet, there can be no alternative to this feat because, without proper, accurate and courageous understanding and depiction of Israeli settler colonialism and Palestinian resistance to it, Israel will continue to oppress Palestinians while presenting itself as the victim.

Home

If the request method was not HEAD and the server wishes to make public why the request has not been fulfilled, it SHOULD describe the reason for the refusal in the entity.
